ROLLO STUDIO

Rollo Studio is a cutting-edge design brand that utilizes advanced digital software and additive manufacturing technology to create innovative and sustainable lighting products. Founded in October 2020, we have quickly established ourselves in the global design industry, participating in major design weeks and being represented by prestigious galleries around the world.

Our work is centered around the concept of biomimicry, which involves studying and emulating the designs and processes found in nature in order to create functional and aesthetically pleasing products. Specifically, we specialize in creating contemporary lighting pieces for interior design using organic geometry and earthy materials. We believe that by incorporating principles of biomimicry into our design process, we can create products that are not only visually appealing, but also have a positive impact on the environment.

**Celestial Light,
Earthly Elegance**

Unveiling the Orbx Collection by Rollo Studio, where advanced technology meets the timeless beauty of nature in an extraordinary fusion of form and function. This collection showcases a variety of modular lighting configurations, a testament to innovative design and modular interactivity, crafted with meticulous precision and inspired by the duality between earthly elements and the boundless expanse of space.

From Sand to Stars

At the heart of this design lies the meticulously 3D-printed sand elements, a material that embodies both resilience and elegance. The lamp's core is defined by a pristine white band, strategically positioned to diffuse light across surfaces with a soft, ambient glow. This gentle illumination transforms ordinary spaces into celestial realms, embodying the collection's core philosophy of blending nature with cutting-edge technology.

**A Visual Symphony of
Light, Shadow, and
Form**

Named the "pod" for its striking resemblance to a small spacecraft, this lamp exemplifies modular versatility. It is ingeniously designed to be effortlessly removable from its stand, thanks to a seamless magnetic attachment system. The user can choose from three distinct stand options—no stand, small stand, or large stand—each one enhancing the lamp's adaptability and interactive charm.

**Transforming Interiors
into Celestial Realms**

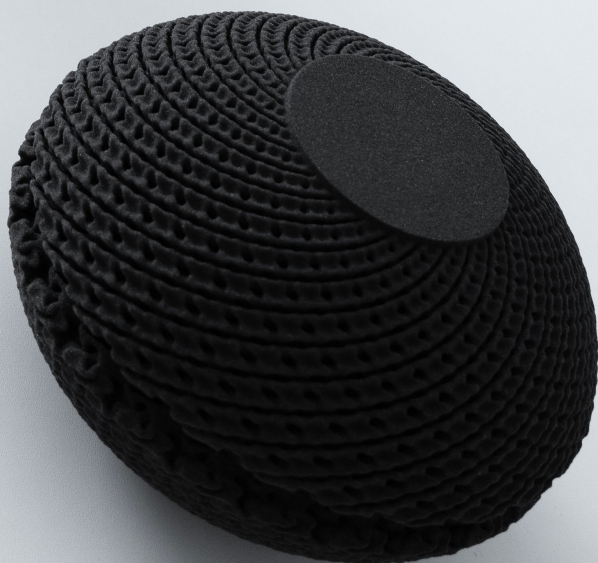

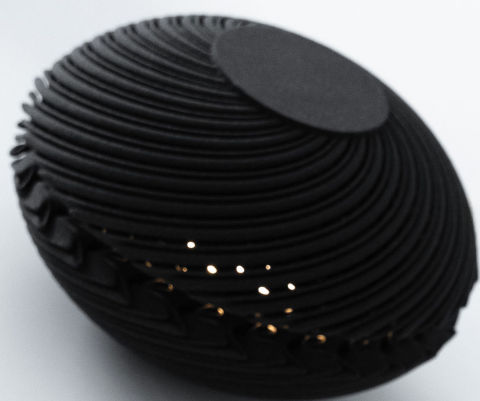

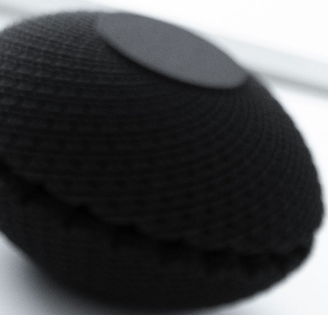

The intricate beauty of the 3D mesh structures unveils a mesmerizing interplay of light and shadow, as light gracefully filters through a labyrinth of complex geometrical patterns. This delicate dance of illumination is a testament to an unparalleled level of precision, meticulously crafted at a refined scale. Each element of the mesh reveals a masterful blend of advanced technology and artistic finesse, creating a luminous tapestry that captivates with its depth and intricacy.

**Where Earth Meets
the Cosmos**

The Orbx Collection captures the essence of biophilic design while embracing the marvels of 3D printing. It explores the intriguing interplay between organic forms and technological advancements, inviting a playful engagement with its modular nature. This design not only illuminates but also interacts with its environment, merging advanced manufacturing techniques with natural inspiration.

Unconventional**

SUN LAMPS

A collection where light becomes a medium of sculpture, as it creates an intricate dance of contrast and colour. Welcome to the Aureole Collection - where artistry and innovation converge to create an avant-garde series of wall-mounted lighting pieces that transcend the ordinary and embrace the extraterrestrial.

Inspired by the complex forms of the sunflower's inner disk flowers, the Aureole Collection is an ode to nature's intricate beauty and a testament to the studio's biophilic design principals. The aim was to explore spiralled structures that intertwine with each other, folding and curving to create layers of depth. Each lamp has its own unique surface geometry to distribute and diffuse light and shadow in different ways.

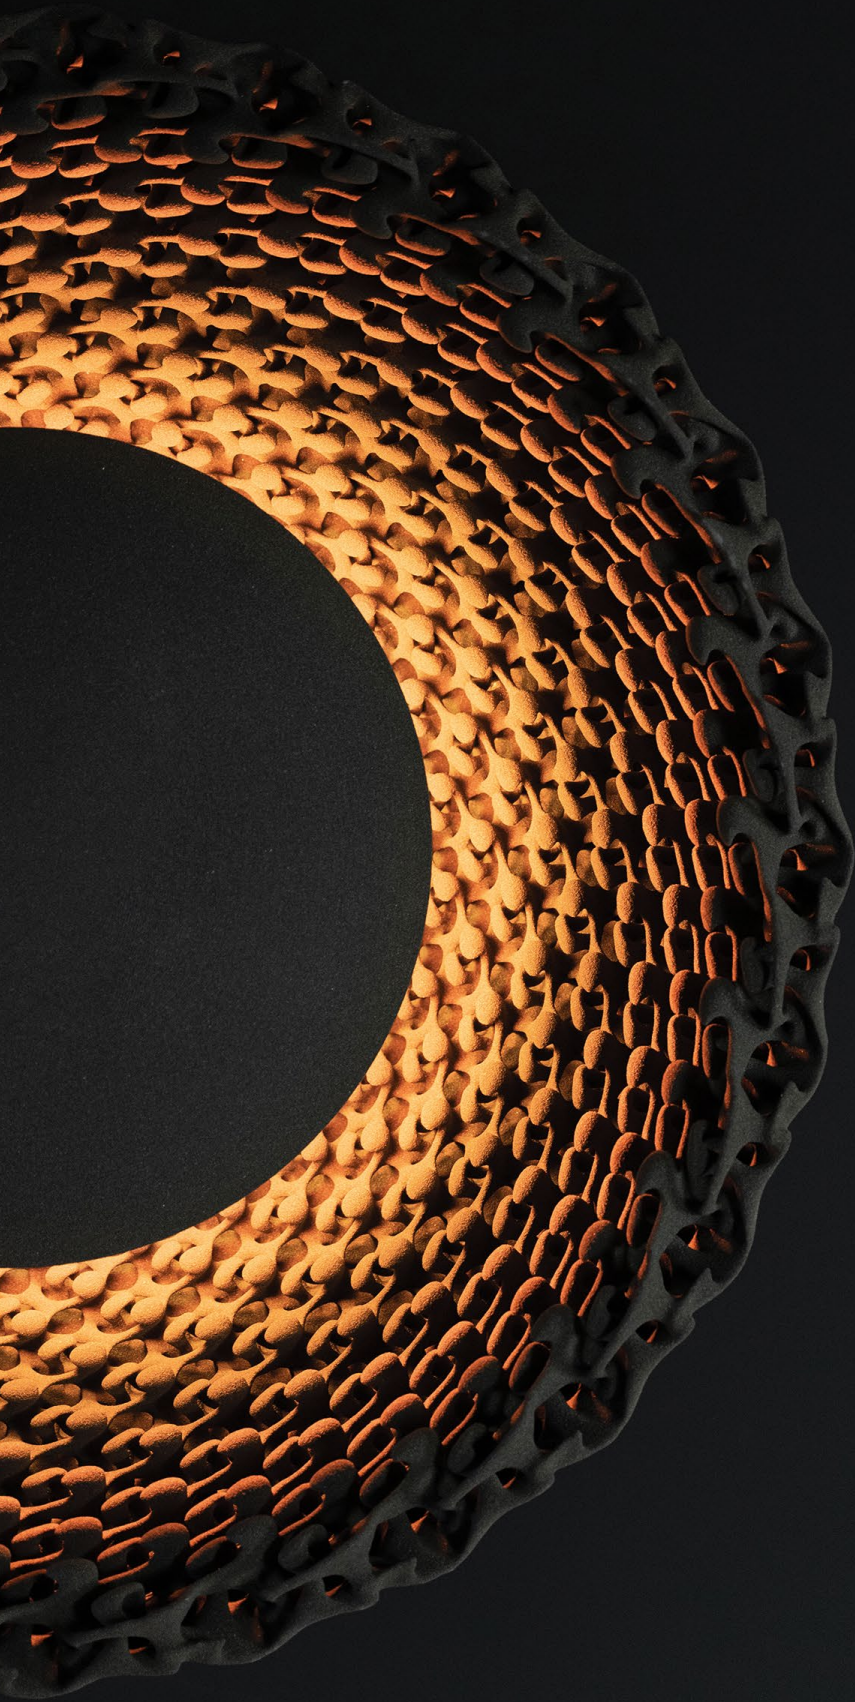

As you move around the lamp, the spirals seem to gravitate, pulling you into their mesmerising embrace. But it's when you stand directly in front that the true magic unfolds. The pattern harmonizes into a visual synchrony, leaving the observer without a clear focal point, the experience becomes almost hypnotic.

The Aureole Collection isn't just about lamps; it's about crafting extraordinary art pieces. These experimental creations are born from the fusion of cutting-edge 3D printing technology and the enigmatic beauty of black sand. Like celestial sunflowers in a cosmic garden, these lamps exude an otherworldly aura, invoking a sense of wonder and mystique.

This collection challenges conventions, blurring the line between functionality and artistry. These lamps are not merely sources of illumination; they are portals to a world of experimentation, luxury, and uniqueness. Each piece is a testament to our commitment to pushing the boundaries of design, creating not just lamps but statements that ignite conversations and enhance contemporary spaces.

**Sculpted by
Technology, Inspired
by Nature.**

From Sand to Light

**Where Art Meets
Function**

DUNE LAMPS

The Dune Collection is a unique and elegant series of 3D printed lighting fixtures, inspired by the captivatingly formed desert landscapes. Each lamp is meticulously crafted using advanced 3D printing technology and carefully selected quartz sand, resulting in exceptional detail and surface finish that evokes the beauty of natural formations. The sand material used in the production process diffuses the light output, creating an ambient red glow that perfectly reflects the soft haze of dusk in the barren desert landscape.

These lamps not only serve a functional purpose but also function as statement pieces that enhance the overall aesthetic of any contemporary interior. Produced by a small design studio, each piece in the Dune Collection is imbued with meticulous attention to detail and a deep commitment to artistic design, making them a testament to the studio's dedication to pushing the boundaries of what's possible in lighting design.

With their organic nature and elegant forms, these lamps are the perfect addition to any modern space, serving as a reminder of the delicate beauty of natural landscapes in our modern world. The collection is ongoing and will soon include wall-mounted and hanging lamps, offering a diverse range of lighting solutions

LAVORA LAMPS

The 'Lavora Suede' table lamp is one of our most recent design pieces and lends its name to the extended 'Lavora Collection'; an ongoing body of limited works that push the boundaries of additive manufacturing and software technologies. Inspired by the intricate formations of desert dunes as they morph and shift in the breeze.

The structure of the piece allows light to penetrate through hidden openings and diffuse softly across the textured surfaces. As a composition of rolling curves, the outer form is carved out of the contours and accentuated. We like to think of light as a medium that can be shaped like its fluid; using surfaces as a source of emission and shadows to define depth.

Fitting a contemporary setting, this piece serves as a statement to the formally straight and rigid interior. The warm glow of illuminated sand has an almost therapeutic quality; ambient and serene as it compliments the evenings close.

Harnessing Cosmic Forces

The Orbital Collection represents a harmonious fusion of environmental consciousness and captivating visual design, drawing inspiration from the profound beauty of the natural world. Each piece within this collection is a testament to the potential of advanced digital software and cutting-edge additive manufacturing technology, bringing to life intricate forms and structures that echo the organic patterns found in nature.

Crafted by Nature, Perfected by Technology

Carefully crafted with meticulous attention to detail, every lighting sculpture in the Orbital Collection is designed to emit a soft, diffused light that elegantly highlights the curves and textures of its biomimetic design. The use of quartz sand as the primary material further enhances the collection's unique aesthetic, blending the ancient and the futuristic in a way that feels both modern and timeless. The organic forms are not merely decorative; they are a celebration of the complex interplay of forces that shape our universe, reflecting the dynamic processes of nature through the medium of light.

Intricate Forms, Soft Light: The Essence of Orbital

One of the standout pieces in this collection, the Odyssey light sculpture, exemplifies the collection's ability to create an otherworldly atmosphere. The design is inspired by the cosmic forces that sculpt the natural world, from the shifting sands of desert dunes to the swirling patterns of galaxies. This inspiration manifests in forms that blur the boundaries between the natural and the synthetic, resulting in lighting sculptures that are as much a statement of art as they are functional pieces of design.

Blurring the Lines Between Natural and Synthetic

The Orbital Collection is more than just a series of lighting fixtures; it is a celebration of the intersection between design, nature, and technology. It embodies a deep respect for the natural world, with each piece serving as a reflection of the studio's commitment to sustainability and innovation. By harnessing the power of additive manufacturing and sustainable materials, the collection not only pushes the boundaries of what is possible in lighting design but also contributes to a more sustainable future.

A Testament to Nature's Intricacies

Whether illuminating a contemporary interior or serving as a focal point in a modern space, the Orbital Collection brings a sense of wonder and intrigue, inviting those who encounter it to reflect on the beauty and complexity of the natural world. It is a testament to the power of design to evoke emotion, spark curiosity, and inspire a deeper connection to the environment.
